Room 111**

Educational Philosophy Statement:

The development and learning that children encounter in their elementary classroom has a great influential impact on students' academic success. To ensure academic success, I believe that learning should be attainable for all students regardless of abilities, learning styles, or behavior. It is my job, as a teacher, to ensure success for all students. I believe in a least restrictive environment, in which all students can freely express him/her self, working collaboratively to achieve their goals. In addition, assignments and projects should be related to real life situations. I feel this is important, because it will give students a better perspective on the reasons for learning. Through real-life examples technology will be incorporated to give students a wide range of what is going on in their everyday life.
